DENTRIXASCEND

DEXIS™

Real Cloud Imaging

Seamless, fast and 100-percent-cloud imaging available for Dentrix Ascend

DEXIS™ **for Dentrix Ascend** is a custom-made imaging solution built exclusively for Dentrix Ascend. It requires no bridges and no on-premises imaging servers. Because it's truly cloud-based, it frees your office from IT tasks like upgrades, image storage and backups.

DEXIS for Dentrix Ascend is a true cloud-based imaging solution. Available by monthly subscription, it offers your practice these advantages:

- **Fast image access**—Images are captured directly to the cloud for immediate access by all locations and devices.

- **High-quality images**—A patented process captures the original digital image and uploads it (not a copy) with no loss of quality.

- **Powerful editing tools**—Annotation and density reading tools are included, improving patient care.

- **Seamless workflow**—The system automatically attaches the ADA code to each image for accurate ledger history and improved workflow.

- **Easy attachment**—Images can be easily attached to eClaims for insurance submission.

- **Improved productivity**—Patient visits go more smoothly, with a simple click on the imaging button in the patient's chart and no waiting for image uploads.

- **Industry-leading support**—DEXIS for Dentrix Ascend is supported by Henry Schein, the world's largest provider of healthcare products and services to office-based dental practices.

Use Your Regular Workflow

DEXIS for Dentrix Ascend follows your practice's workflow. When a patient comes in for an X-ray, you click the imaging button in their chart and choose the ADA code associated with the X-ray you're going to take. You don't need to open a separate application. The image is automatically stored in the patient's record, and the procedure is posted to the patient's ledger, with the appropriate ADA code.

Access Images Instantly from All Locations

DEXIS for Dentrix Ascend immediately loads images to the cloud. There's no desktop limbo where images wait to sync up to the cloud later. As soon as you take the X-ray, that image is available to all authorized devices and users on your system—wherever they might be. A patented image uploader in DEXIS for Dentrix Ascend sends images to the cloud in as little as 1.5 seconds. Images are stored by date, so you can quickly find images from the patient's previous visit.

Forget About Upgrades and Hardware

Because DEXIS for Dentrix Ascend is cloud-based, you don't have to manage a server, run backups, maintain the network, add more storage, upgrade the software, or do any IT tasks that on-premise systems need. Upgrades and backups happen automatically. And, you save thousands of dollars because you don't need an imaging sever in your office.

Easily Edit Images and Collaborate with Partners

DEXIS for Dentrix Ascend includes powerful editing tools so you can quickly get images where they need to be in order to provide the best patient care. Annotation and density reading tools allow you to add information or mark areas on the image that need extra attention. In a matter of seconds, X-rays can be pulled up by a doctor or specialist in another location for advice and collaboration.
